ELECTRIC FORKLIFT TRUCK
OPERATOR'S MANUAL

77 SERIES
FB10P/14P/15P/18P
FB20P/25P/28P
FB30P/35PJ

⚠️ WARNING ⚠️
Unsafe use of this lift truck may cause serious injury or death. Operators and maintenance personnel must read this manual and be sure that they understand its contents before operating, inspecting or carrying out maintenance on this lift truck. This manual should be kept near the lift truck for reference and periodically reviewed by all operators and maintenance personnel who come in contact with it.
INTRODUCTION

The operator must read and understand the instruction of safe operation contained in this manual.

- This operator’s manual provides for the proper operation, easy maintenance and periodical inspection.
- Prior to operation, read this manual carefully for safe and efficient operation.
- Specifications and equipment in this manual are subject to change without any notice by the manufacturer for further improvement and modifications.
- Make sure these important instructions in this manual are available for the operator on each delivery or transfer of lift truck. Keep this manual after reading.
- If you have any questions, please feel free to contact your local NICHYIU dealer.

! and ▲ are very important for you and others for safety. Follow these instructions.

Decals and name plates

CAUTION
Decals and name plates are installed on the forklift truck to give information about possible hazards.

CAUTION
If you find that the decals and name plates are removed and/or unreadable, contact your local NICHIYU dealer for replacement.

Indication of direction (Right side / Left side)

The following illustration shows the direction of this forklift truck from the operator's compartment.

Decals and Name Plates
1. SAFE OPERATION

1. Lateral tipover can occur when unladen if the combination of speed and sharpness of turn produces an overturning moment which exceeds the stability of the truck.

2. Lateral tipover can occur if overloaded or loaded within capacity and the load is elevated and if turning and/or braking when traveling forward or if turning and/or accelerating when traveling forward produces an overturning moment which exceeds the stability of the truck.

3. Loss of control by the operator can cause the truck to tip over and can further aggravate the above conditions.

4. Serious injury or death can occur to the operator if he/she is trapped between the truck and the ground.

IN CASE OF TIPOVER

1. The operator should stay with the truck if a tipover occurs. The operator should hold on firmly and lean away from the point of impact.

2. The operator should stay with the truck if it falls off a loading dock or ramp. There are other situations where the environment of the landing area presents a severe hazard. In those incidents, it may be prudent for the operator to leave the truck.

FOR SAFETY NOTICE FOLLOWING WARNINGS

1. Apply parking brake before leaving truck. Make adjustments to provide adequate braking.

2. Fasten seatbelt. Do not jump! Lean forward hold on tight. Brace feet. Lean away from impact.

3. Truck can TIP OVER! Risk of serious INJURY or DEATH.

4. For safety notice following warnings:

   1. Lateral tipover can occur when unladen if the combination of speed and sharpness of turn produces an overturning moment which exceeds the stability of the truck.
   2. Lateral tipover can occur if overloaded or loaded within capacity and the load is elevated and if turning and/or braking when traveling forward or if turning and/or accelerating when traveling forward produces an overturning moment which exceeds the stability of the truck.
   3. Loss of control by the operator can cause the truck to tip over and can further aggravate the above conditions.
   4. Serious injury or death can occur to the operator if he/she is trapped between the truck and the ground.

IN CASE OF TIPOVER

1. The operator should stay with the truck if a tipover occurs. The operator should hold on firmly and lean away from the point of impact.

2. The operator should stay with the truck if it falls off a loading dock or ramp. There are other situations where the environment of the landing area presents a severe hazard. In those incidents, it may be prudent for the operator to leave the truck.

WARNING

6. (Option)

Do Not Stare Into Beam

New Output C1 Class: Warning Radiation, D, Class Laser Class

CERTIFICATE

This certificate is valid for use in a specific laser class. It is important to maintain proper laser Class levels and to be certified by a registered laser Class professional.
1. SAFE OPERATION

8 (Option)

![DANGER LASER LIGHT]

- Do not stare into light.
- Do not light at people or animals.
- Do not use in area where any abnormalities may be occurred by laser light.
- Consult to physician immediately if any health problems are occurred by laser light.

9

![PRECAUTIONS FOR SAFETY OPERATION]

1. Do not overload, observe allowable load (blue zone).
2. Prior to operation, check performance of brake or turn quickly.
3. Do not make a sudden start and brake or turn quickly.
4. Do not make a sudden valve lever operation at a high lift.
5. Do not run sideways or handle on an incline.
6. When the red lamp of battery capacity indicator turns on, charge battery.
7. Check electrolyte every week and replenish water.
8. Be sure to use the prescribed fuses.

11

![SAFETY PRECAUTIONS FOR CHARGING BATTERY]

1. Charge the battery only in approved and well ventilated area without smoking, flames and / or sparks. (Flammable gas will be generated by the battery while charging.)

2. Open the battery cover fully when charging the battery.

3. Inspect any damages on the charger cable before charging the battery.

4. Do not use the cable if any damages or transformation are found.

5. Grab the plug itself when connecting or disconnecting the cable. Do not pull the cable when disconnecting to avoid damages.

6. Insert the plug completely to the end of the receptacle. Improper connection may cause overheating or burning while charging the battery.

7. Do not disconnect the plug while charging. It may create sparks.

8. Push the "STOP" button when interrupting to charge before.

9. If any abnormalities are found on the cable or plug such as abnormal heating, electric shocks, loosening connection, any transformations disconnecting the plug, or damage of parts, stop charging immediately and repair them.
1. SAFE OPERATION

12

[Images of illustrations]

13

Lock release method of gas spring

14

(LUBRICATION 点検給油表)

15

(with Japanese battery only)

DANGER

- GASES produced by this battery can be explosive.
- Cigarettes, flames or sparks could cause battery to explode.
- Make sure batteries are stored and charged in a well-ventilated area.
- Batteries contain SULFURIC ACID can cause severe burns.
- Avoid contact with skin, eyes or clothing.
- In event of accident flush with water and call a physician immediately.
- Wear rubber gloves to prevent ELECTRIC SHOCK during checking and maintaining.
- Keep out of reach of children.

IMPORTANT POINT FOR MAINTENANCE

1. Keep the electrolyte level at proper height.
   (When electrolyte decreased, fill purified water and stop filling immediately if confirmed the white line of the float as shown herein, for over-filling causes overflow.)
2. Always give the battery an adequate charge and do not use the battery at overdischarged condition.
3. Keep the surface of battery clean and dry.
Information for safety operation

**WARNING**
Do not operate forklift truck while taking drugs and/or alcohol; otherwise, an accident may occur which can cause serious injury or death.

**CAUTION**
Only a trained and authorized operator shall operate the forklift truck.

**CAUTION**
The operator is recommended to wear a helmet, safety shoes and working clothes.

**CAUTION**
Do not use a forklift truck in the following circumstances.
Where the explosive gas (thinner, gasoline etc.) may exist.
When using a forklift truck in the following area, consult your local NICHIYU dealer before operation.
1. Where the explosive materials such as gunpowder are exist.
2. The dusty place.

**CAUTION**
Keep the operator's compartment clean at all times.

**CAUTION**
Do not operate the forklift truck with greasy or wet hands.

**CAUTION**
NICHIYU forklift trucks are equipped with an overhead guard and load backrest extension.
- These designed features are incorporated to protect the operator from falling loads.
- Make sure they are in place and in good condition.
- Precautions still should be exercised by the operator for possible falling objects or impacts.

**CAUTION**
Do not modify the forklift truck.
- Modifications and additions shall not be performed without the written approval of NICHIYU. Contact NICHIYU's qualified facility for details.
- Do not install any parts blocking visibility from operating position.
1. SAFE OPERATION

**CAUTION**

Carry out the daily inspection before operation.

**CAUTION**

- Stop operation and report immediately for any damages or faults on the forklift truck.
- Do not operate the forklift truck until it is repaired completely.

**WARNING**

Do not overload. Failure to observe the rated capacity can cause the forklift truck to tip over.

- Refer to the load chart and make sure that the weight of the load and the load center are within the capacity of your forklift truck before handling. If the attachment is installed on the forklift truck, the maximum loading capacity should be reduced. Read the instruction manual of the attachment before operation.

**CAUTION**

Use proper size pallet with enough strength for the load.
1. SAFE OPERATION

**CAUTION**
Make sure that the load is palletized securely in a proper shape. If a load is unstable, it can easily shift and fall on someone.

**CAUTION**
Fasten seat belt while operation.
- Adjust the seat position before turning on the key switch. After adjusting, jiggle the seat to make sure if it is properly locked.
- Adjust the seat and steering handle positions before operation for safety.

**WARNING**
Do not adjust the seat while truck is in motion.

- **How to fasten the seat belt**
  Grip the plate (connector) of the belt and pull it from the retractor. Then insert the plate into the slot of the buckle until locking. Make sure the belt is not twisted.

Be sure to fasten the belt across your hips, not across your abdomen.

**WARNING**
If you fasten the belt across your abdomen, the belt may tug your abdomen in the event of an accident.
- It is not necessary to adjust the belt length. The belt is designed to fit any size.

- **How to release the seat belt**
  Push the button of the buckle to release the belt. The belt will automatically retract when release. Hold the plate of the belt and allow it to slowly retract.
1. SAFE OPERATION

⚠️ WARNING
The seat belt would “jackknife” the operator. That is, the upper body would bend at the waist. If you are pregnant or have suffered from some abdomen disease, consult a physician before using the seat belt.

⚠️ WARNING
If the seat belt is torn, or damaged, replace it immediately.
- Contact your local Nichiyu service dealer for replacement.

⚠️ CAUTION
Use wet cloth to clean the belt. Neutral detergent may be used but do not use any solvent such as gasoline.

⚠️ CAUTION
Look all around the forklift truck before moving.
- Make sure no person is around the forklift truck before starting.

⚠️ CAUTION
Travel in backward if forward visibility is blocked.

⚠️ CAUTION
Make sure no person is around the forklift truck when traveling backward. Look around behind the forklift truck and sound the horn before moving.
- If the load blocks your view, or when you travel down a grade with a load, drive backward. Always look in the direction of travel. A look-out helper may be required if your visibility is obstructed.
1. SAFE OPERATION

Stop at blind corner and/or intersection.
- If you cannot see where you are going, don’t move! Travel slowly around corners.
- Sound the horn at cross aisles and other areas where you cannot see clearly or where visibility is restricted.

Always look in the direction of travel!
- Always be aware of people near your forklift truck. Do not proceed near them until they are aware of you.

Be aware of tail swing.
- Always make sure that the tail swing area is clear before turning.
- When turning in aisles, especially narrow aisles, keep as far away as possible from stock and racks. Be extra cautious near people.
- Failure to observe the tail swing area when making a turn can injure or kill someone.

Do not make a sudden start, stop or turn.
- A sudden start or braking can cause the load to fall.
- A sharp turn while traveling can cause the forklift truck to tip over.
1. SAFE OPERATION

**CAUTION**
Do not go over obstacles, curbs, ditches, ridges and railroad trucks.
- Avoid bumps, holes, spill spots and loose materials that may cause the forklift truck to swerve or tip. If unavoidable, slow down, and proceed with caution.

**CAUTION**
Always check road surface, and stay away from soft or uneven ground to avoid a tip over.

**CAUTION**
Avoid slippery surface.
- Water, sand, gravel, ice or mud can cause a tipover. If unavoidable, slow down.
- Do not go into a flooded or water covered area.

**CAUTION**
Keep enough clearance.
- Serious accidents can be caused by hitting pipes and beams near the ceiling with mast or overhead guard. Make sure there is enough clearance for ceiling and height limit of the entrance.

**CAUTION**
Do not exceed the limitation of the floor strength.
- A forklift truck is very heavy. Check the condition of the driving surface. Make sure the floor, bridge and/or elevator will support the weight of the forklift truck and the load.
1. SAFE OPERATION

---

**CAUTION**

Do not travel while the forks are in the raised position.

- Traveling while lifting the forks can cause the unstable condition to tip the forklift truck over.
- The fork height should be 150 to 200 mm high from the ground and the mast should be tilted back while traveling.

---

**CAUTION**

Do not abuse the forks.

- Do not push or drag the load.
- Do not lift the load by the tip of the forks.
- Misuse can damage the loads as well as the forklift truck.

---

**WARNING**

Never allow anyone to walk or stand under raised forks.
1. SAFE OPERATION

**WARNING**
- Never allow anyone to ride on forklift truck other than operator.
- At no time shall anyone be allowed to ride on forks of forklift truck.

**CAUTION**
Keep enough distance from the edge of docks, ramps and platforms.

**CAUTION**
Travel carefully on grades a loaded forklift truck.
- When traveling up or down a grade with a heavily loaded forklift truck, keep the load upgrade to maintain control.
- Travel down with foot or plugging brake if necessary.
1. SAFE OPERATION

**CAUTION**

Do not turn on, or angle across an incline.

- Failure to observe this rule can cause the forklift truck to tip over.

**CAUTION**

Do not handle an off-center load.

- If the weight of the load is not centered between the forks, the load can fall from the forks when you turn a corner or hit a bump.
- An off centered load will increase the possibility of the forklift truck tipping over to the side.

**WARNING**

Never put any part of your body into mast structure or between mast and forklift truck.
Do not climb on the mast or overhead guard.

**WARNING**

Do not put any part of your body outside operator's compartment of forklift truck.

- Keep hands and feet inside the operator's compartment.
1. SAFE OPERATION

⚠️ CAUTION
Operate hydraulic control levers slowly when loading or unloading.

⚠️ CAUTION
Do not stop the load suddenly when lowering.
- Failure to observe this instruction, can cause the forklift truck to tip over.

⚠️ CAUTION
Do not tilt an elevated load forward.
- Tilt the mast backward enough and stabilize the load when traveling.
- Tilt the mast vertically when lifting.

⚠️ CAUTION
Drive into a trailer carefully.
- Make sure the trailer brakes are set and the wheels are blocked while loading or unloading.
1. SAFE OPERATION

**CAUTION**

Do not jump on or off the forklift truck.
- Do not grasp the steering wheel or hydraulic levers to ride in the forklift truck.

**CAUTION**

Do not pick the loads up beyond the backrest extension height.
- When handling double stack loads, fasten together with a band to prevent the load from falling.

**CAUTION**

Do not pull the forks out from a pallet if chains are loosen.
- It is dangerous to have chains that are loose. It can cause to catch the load or racks by the forks or falling loads.

**NOTE**

When chains are loosen:
- Lift the forks a little until correcting chains.
- After correcting chains, pull the forks out from a pallet.

**CAUTION**

Do not abuse forks.
- Misuse can cause an accident as well as property damage.
1. SAFE OPERATION

**CAUTION**

Do not tow anything by draw-bar pin.

- The draw-bar pin is equipped for towing the truck by another tractor if any problems are occurred.

**CAUTION**

Avoid off-center loading.

- Set the forks as far apart as possible for the maximum support of the pallet or load.
- Improper spreading of forks can cause unstable or off-center loading.

**CAUTION**

Make sure the fork set pins are applied correctly.

**CAUTION**

Travel carefully when handling a long or wide load.

- Be careful when handling a load. The load should be handled at a low lifting position.
- Lifting and lowering should be done slowly.

**NOTE**

When carrying a wide load, the suitable wide bar should be mounted. (Option)
1. SAFE OPERATION

WARNING
Never allow anyone to hold or pick loads off while traveling or lifting.
- Failure to observe this rule can cause serious personal injury.

CAUTION
Do not use damaged pallets.
- Make sure pallets and skids are sturdy and in safe operating condition.

CAUTION
When parking the forklift truck:
- Tilt the forks down and lower on the ground.
- Apply the parking brake.
- Turn off the key switch and remove the key before leaving the forklift truck.

Parking place:
- Park the forklift truck at the reserved place.
- Do not park on or near flammable objects.

CAUTION
Do not park the forklift truck on a slope.

OUT OF ORDER LIFT TRUCK
- When parking a forklift truck requiring repair, a warning or "out-of-order" sign shall be placed on the forklift truck and the key shall be removed.
- When the forks cannot be lowered because of a fault, place a large sign or marker on the forks. This procedure will caution other forklift trucks and pedestrians.
1. SAFE OPERATION

How to survive in a tip over

Safety notice for tip over

- Lateral tipover can occur when unloaded if the combination of speed and sharpness of turn produces an overturning moment which exceeds the stability of the forklift truck.
- Lateral tipover can occur if overloaded or loaded within capacity and the load is elevated and if turning and/or braking when traveling backward or if turning and/or accelerating when traveling forward produces an overturning moment which exceeds the stability of the forklift truck. Backward tilt and/or off-center positioning of the load and/or uneven ground conditions will further aggravate the above conditions.
- Longitudinal tipover can occur if overloaded or when loaded within capacity and the load is elevated if forward tilt, braking in forward travel, or commencing backward travel produces an overturning moment which exceeds the stability of the forklift truck.
- Serious injury or death can occur to the operator if he/she is trapped between the forklift truck and ground.

In case of tip over

- The operator should stay with the forklift truck if lateral or longitudinal tipover occurs. The operator should hold on firmly to the steering wheel, brace feet, lean forward and lean away from the point of impact.
- The operator should stay with the forklift truck if it falls off a loading dock or ramp. There are other situations where the environment of the landing area presents a severe hazard. In those incidents, it may be prudent for the operator to leave the forklift truck.

In case of tip over:

- Do not jump off.
- Hold on tight to steering wheel.
- Brace your feet.
- Lean away from impact.

- Fasten seat belt while operation.
PART NAME AND FUNCTION

Name of part

13. Safety monitor for parking brake
14. Safety monitor for operation interlock system
15. Safety monitor for seatbelt (Option) [Standard for Australia]
16. Service (spanner) mark
17. Mode select button

Icons of 8 to 16 shown in the illustration are displayed for the explanation. They are displayed only when abnormalities are occurred.
Indication of display

When the key switch is turned on, the self-diagnosis function checks the control system and display "MONITORING OK" when no problems are found. Icons of "Read operator's manual" are flashed three times for warning to the operator.

After 2 or 3 seconds, the normal screen is displayed. If any abnormalities are detected, the error message is displayed. If the long message is displayed or some messages are displayed, they are scrolled from right to left alternatively.

If traveling or hydraulic operation is done while this (within 3 or 4 seconds), the normal screen is displayed after finishing the initial monitoring function.

Contact your local NICHYU dealer if the error message is displayed.

Mode select button

Mode selection

Push ® button.

- Reserve charge screen
  - Set the starting time of battery charge.

(This screen is displayed if the optional built-in charger is equipped.)

Push < button.

- Electricity consumption meter
  (Only for built-in charger)
- Hour meter screen
  - Indication of electricity rate, eliminated amount of CO2
  - Three hour meters of traction, hydraulic and the total hour are displayed.

Push @ button.
(Release within 3 seconds.)

  - Slow speed mode setting
  - Travel mode setting
  - Hour meter / odometer selection
  - Display mode setting
  - Coast mode setting
  - Pitching mode setting

Push @ button.
for more than 3 seconds.

- Date / time setting screen
  - For setting of date and time.

Refer the page 24, 29 for details.

Refer to each setting section.

Refer the page 32 for details.
2. PART NAME AND FUNCTION

Function of display

This forklift truck has the self-diagnosis function.

Icons of 8 to 16 shown in the illustration are displayed for the explanation. They are displayed only when abnormalities are occurred.

1. Battery indicator
The battery indicator shows the discharged condition of the battery.

If the forklift truck is used after discharging the battery more than 80%, the lifetime of the battery will be shortened. Then, stop to operate the forklift truck and charge the battery immediately.

<table>
<thead>
<tr>
<th>Full charged</th>
<th>In case of 40% discharge</th>

<tr>
<td>When the battery capacity is less than 20%, all blue segments are disappeared and two red segments are lit.</td>
<td>When the capacity is less than 20%, one red segment is flashed with the frame of the indicator. When the capacity is empty, only the frame of the indicator is flashed.</td>
<td></td>
</tr>
</tbody>
</table>

22
2. PART NAME AND FUNCTION

• Lift interrupt
When all green segments are disappeared and two red segments are lit, the lift speed is reduced by half. At the same time, "CHARGE THE BATTERY" message appears on the screen. When the truck is continued to use, only one red segment is started to flash and the lift function is interrupted.

2. Slow speed mode monitor (Turtle mark)
When the turtle button is pushed, the turtle mark is indicated on the screen with the preset speed.

3. Fork horizontal indicator (Option)
This mark is indicated when the fork is horizontal and possible to use the laser pointer.

4. Speedometer
The traveling speed is displayed on the screen.

5. Reserve charge indication (Only for built-in charger)
The reserved date and time to start charging the battery is displayed. Refer the section of "Battery and charger" for details.

6. Date and time (Calendar and clock)
The current date and time are displayed. If the @ button is pushed for more than 3 seconds, the display is changed to the setting screen. Refer the page 32 for details.
2. PART NAME AND FUNCTION

7. Hour meter
The hour meter shows the total hours of turning on the key switch.
(The actual operating hours can be displayed as option.)
It is useful to know the total operating hours for the daily job management and scheduling of the periodical inspection.

When pushing << button on the normal screen and pushing ® button 3 times, the confirmation screen of hour meter is shown.

After 5 seconds, the normal screen is displayed.

Odometer or load weight can be displayed instead of the hour meter.
Refer the meter mode setting in the setting mode section.

- The normal screen is displayed automatically after 5 seconds from coming up the above any screen state.
- By pushing << or ® button, the above any screen state is normal screen immediately.

- When the screen displays the odometer, the word of “TRAVEL” is flashed while traveling.

- When the load weight is indicated, “LOAD” message is displayed on the screen. When the weight is measured, “LOAD” message flashes for 5 seconds after hydraulic operation. When flashing “LOAD” message, the indicated weight may be changed. After stopping to flash, the correct weight is indicated.

8. Safety monitor (for travel circuit)
When fault is detected in the travel circuit, the travel icon flashes and the presumed defective part name is displayed.

9. Safety monitor (for hydraulic circuit)
When fault is detected in the hydraulic circuit, the hydraulic icon flashes and the presumed defective part name is displayed.

10. Safety monitor (for steering circuit)
When fault is detected in the power steering circuit, the steering icon flashes and the presumed defective part name is displayed.
11. Safety monitor (for brake fluid level)
When the brake fluid level is low, the brake icon flashes and "REFILL BRAKE OIL" message is displayed.

NOTE
If the error message of parts or "REFILL HYD. OIL" is displayed, contact your local NICHIYU dealer to check the truck.

12. Safety monitor (for battery electrolyte level) (Option)
When the electrolyte level is lower than the specific level, the battery icon flashes and "REPRENISH RINED WATER FOR BATTERY" message is displayed.

13. Safety monitor (for parking brake)
When the parking brake lever is pulled, the parking brake icon flashes. When the operator starts traveling without releasing the parking brake lever, the warning buzzer beeps and "RELEASE PARKING BRAKE" message is displayed.

14. Safety monitor (Operation Interlock System (OIS))
The system will interrupt traveling and hydraulic functions if the operator does not sit on the operator's seat correctly.
If the operator leaves the seat when operating the truck, the OIS icon flashes to warn the operator, firstly. If that situation continues for more than 2 seconds, the buzzer beeps and traveling and hydraulic functions are interrupted. If the operator sits on the seat correctly within 2 seconds, the system does not work.
When traveling and hydraulic functions are interrupted, quit operation once and start again after sitting on the operator's seat correctly.

CAUTION
The operation interlock system interrupt the current flow to the traction motor but does not apply the mechanical brake. So, if the interlock system activates while traveling, the forklift truck may keep moving by inertia.

CAUTION
After activating the interlock system, it is not reset when the directional lever is in the forward or reverse position even if the operator sits on the seat correctly. Then, move the directional lever to the neutral position once to reset the system.

15. Safety monitor (for seatbelt) (Option)
[Standard for Australia]
If the operator does not fasten the seat belt, travelling and hydraulic function do not work.
If the operator unbuckles the seat belt while operation, the seat belt icon flashes and the warning message "FASTEN SEATBELT" is shown on the display.
2. PART NAME AND FUNCTION

16. Service icon
The service icon warns the fault of the forklift truck to an operator. If any faults are detected, the spanner mark is flashed and the presumed defective part name is displayed. If some problems are occurred at the same time, each part name is scrolled alternatively for every 5 seconds.

- If the next fault is detected, all traveling, hydraulic and power steering functions are interrupted.
  B11 : FET-TRAVEL
  B12 : SENSOR-CURRENT TRAVEL
  C21 : FET-HYD.
  C22 : SENSOR-CURRENT HYD.
  E40 : TR-AOS
  *FAIL CURRENT-TRAVEL*
  *FAIL CURRENT-HYD*
  *FAIL VOLTAGE-TRAVEL*
  *FAIL VOLTAGE-HYD*
- All 0, ©, <, > buttons are invalid while displaying these messages.

17. Mode select button
Change the screen to each mode by pushing these buttons.

Slow speed mode button
The slow speed mode is activates by pushing this button.

Normal traveling mode
When the slow speed mode is off, the turtle mark is not displayed.

Slow speed mode
When the slow speed mode is activated, the turtle mark and preset speed are displayed on the screen.

- The maximum travel speed (normal mode) and preset speed (turtle mode) can be changed by pushing the turtle button.
Various kinds of mode selection

1. Slow speed setting
2. Travel mode setting
3. Meter mode setting
4. Display mode setting
5. Coast mode setting
6. Pitching mode setting
7. How to set the date and time

⚠️ CAUTION ⚠️
- These settings are invalid while traveling or depressing the brake pedal.
- If traveling or hydraulic operation is done while setting, the display is returned to the normal screen immediately.

When pushing the @ button, the mode selection screen is displayed. If pushing the @ button again, the normal screen is displayed again.

When setting the mode of next [1] to [6], each button works as below.
- < and > buttons: Move the cursor to select the value.
- @ button: Move the cursor to the next item.
- © button: Back the cursor to the previous item.

[1] Slow speed setting

This mode sets the limited maximum traveling speed under the slow speed mode.

Make sure the turtle button is pushed and the turtle icon is flashed. Then, push < or > button to set the speed.

The maximum speed can be set to 8 steps of 2, 3, 4, 5, 6, 8, 10 and 12 km/h.

After setting, push @ button to move the cursor to the travel mode setting.
If push the @ button, the normal screen is displayed.
2. PART NAME AND FUNCTION

[2] Travel mode setting

This screen is used to set the travel mode.

Make sure that the current traveling mode indication is flashed. Push ⇐ or ⇒ to select the mode. After selection, push ® button to move the cursor to the meter mode setting.
If pushing the @ button, the cursor is moved to the slow speed mode setting.
The traveling mode can be set to the next three modes.

E (ECONOMY)
This mode is convenient for the slow speed inching. This mode saves the battery energy consumption also.

N (NORMAL)
This is the normal traveling mode. The quick acceleration and smooth inching can be realized.

P (POWER)
This is the most powerful mode for acceleration.

[3] Meter mode setting

The hour meter, odometer or load weight can be displayed on the normal screen.

When the cursor is located on the meter mode, press ⇐ or ⇒ button to select HR (hour meter), km (odometer) or kg (load weight: LARGE/NORMAL).
After selection, press ® button go to the next step [4]. To return to the previous step [2], press @ button.

- The difference between kg (LARGE) and (NORMAL) is the letter size of load weight indication.
- When setting "kg (LARGE)", the traveling mode "E (ECONOMY)", "N (NORMAL)", "P (POWER)" is not shown on the display.
2. PART NAME AND FUNCTION

- Load weight indication

  - The load weight indicator is equipped for safe operation, however, the indicated value should be used as reference.
  - The weight must be measured after raising the fork about 500 mm from the floor and stop hydraulic and traveling operation.
  - This function cannot be used as the formal weight scale.

Select "kg" mode.
Raise the fork about 500 mm from the floor.
After releasing the hydraulic lever, "LOAD" message flashes for 5 seconds because the hydraulic pressure is fluctuated while hydraulic operation.
Read the weight after "LOAD" message is fixed.

- If the loading weight is more than 110% of the loading capacity on the name plate, the "LOAD" message is changed to "OVER". This "OVER" message flashes and the warning buzzer is also beeped.
- The setting of overload can be changed. Contact your local NICHYU dealer for details.

Zero adjustment (for net weight)
If you want to deduct the pallet weight to get the net weight of the load, press \( \rightarrow \) button. Then the zero adjust icon is indicated and the indicated weight is changed to 0 (zero) kg.
By pressing the \( \rightarrow \) button again, this function is turned off. This function cannot be changed when "LOAD" message is flashed.

- Electricity consumption meter (Only for built-in charger)
Date [Month/Day], Consumed amount of electricity [kWh] and Electricity rate [Japanese Yen] (or Eliminated amount of CO2 [kg]) can be shown on the display while charging the battery.

  - The standard screen setting is "Electricity rate", As for the change of screen setting, please contact your local NICHYU dealer.
  - Only Japanese Yen can be shown in the screen of electricity rate, The default is 10 Yen/kWh. As for the change of value setting, please contact your local NICHYU dealer.
  - As the backup function, there are data both for last 7 days and for last 2 months.

Screen of electricity rate

Screen of eliminated amount of CO2

29
2. PART NAME AND FUNCTION

Normal screen and meter mode screen

In the case of the hour meter (HR) mode
Normal screen
Total key-on hours

In the case of the odometer (km) mode
Normal screen
Total traveling distance

In the case of the load weight (kg) mode
Normal screen
Actual load weight

Screen of electricity rate

Screen of eliminated amount of CO2

Confirmation screen

* The normal screen is displayed automatically after 5 seconds from coming up the above any screen state. Also, by pushing < or > button, the above any screen state is returned to the normal screen immediately.
[4] Display mode setting

This mode sets the brightness of the screen.

Make sure that the cursor is located on the brightness setting area. Push the < or > button to select the brightness for the best. It can be selected 8 steps (from 0 to 7). After selection, press @ button to go to the next step [5]. To return to the previous step [3], press @ button.

Refer the table below for the brightness settings.

<table>
<thead>
<tr>
<th>BRIGHTNESS (Intensity of back light)</th>
<th>0</th>
<th>7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dark</td>
<td>←</td>
<td>Bright →</td>
</tr>
</tbody>
</table>

[5] Coast mode setting

This mode can set the regenerative braking force when releasing the accelerator pedal while traveling.

Make sure that the REGEN(NEUTRAL) mode screen is displayed. Then push < or > button to select the strength. The braking strength can be set to 4 steps of "NON" (No braking), "LOW", "MID" (Middle) and "HIGH". After selection, press @ button to go to the next step [6]. To return to the previous step [4], press @ button.

The initial setting is MID.

[6] Pitching mode setting

This function will suppress forward and backward vibration of loads while traveling. The effect of this function may vary by the condition of the floor, traveling speed and/or weight of loads. To activate this function, choose "ON" in the pitching mode setting screen by pressing the > button. After selection, press @ button to return the normal screen. If the @ button is pressed, the screen return to the previous step [5].

- This function does not suppress the vibration of overall the forklift truck.
- This function has some level for suppressing the vibration. As for the change of the level, please contact your local NICHYU dealer.
- In case that the feeling is not good remarkably while traveling, choose the better setting by changing the level or changing the setting ON/OFF.
2. PART NAME AND FUNCTION

[7] How to set the date and time

When the @ button is pushed for more than 3 seconds, the date and time setting screen is displayed.
Push @ button to return to the normal screen.

⚠️ CAUTION

If traveling or hydraulic operation is done while setting, the display is returned to the normal screen immediately.

When setting the mode of next 1 to 6, each button works as below.
- <= and >= buttons: Move the cursor to select the value.
- © button: Move the cursor to the next item.
- @ button: Back the cursor to the previous item.

1. Set the year
Make sure the cursor is located on the year area. Push <= or >= button to set the year. The year can be set from 2000 to 2999.
After setting, push the © button to move the cursor to the month area.
If push the @ button, the normal screen is displayed.

2. Set the month
Make sure the cursor is located on the month area. Push <= or >= button to set the month. The month can be selected from 1 to 12.
After setting, push © button for the date setting.
If pushing @ button, the cursor is returned to the year area.

3. Set the date
Make sure the cursor is located on the date area. Push <= or >= button to set the date. The date can be set from 1 to 31. When setting the date, the day of the week is set automatically.
After setting, push the © button to move the cursor to the AM/PM area.
If pushing @ button, the cursor is returned to the month area.
4. Set the AM or PM
Push the ← or → button to select the AM or PM. After setting, push the → button to move the cursor to the hour area. If pushing ← button, the cursor is returned to the data area.

5. Set the hour
Push the ← or → button to set the hour. The hour can be set from 1 to 12. After setting, push the → button to move the cursor to the minute area. If pushing ← button, the cursor is returned to the AM or PM area.

6. Set the minute
Push the ← or → button to set the minute. The minute can be set from 00 to 59. After setting, push the → button. Then "COMPLETE" message is flashed three times. In any cases, push ← button to get the previous step.

**CAUTION**
- When pushing the ← or → button, the second is set to "00".
- After setting the minute and push the → button, the second is set to "00".
- If set the date and time, the reserve charge setting is also renewed.

"COMPLETE" is flashed three times.
Operating equipment

1. Parking brake lever
When parking the lift truck, pull the lever fully to apply the parking brake. To release the brake, push the top button and push the lever forward.

When the parking brake lever is pulled, the parking brake icon is lit. If the operator move the truck without releasing the parking lever, the icon flashes and the warning buzzer is beeped.

- When parking the lift truck, lower the forks on the floor and pull the parking brake lever completely.
- When leaving the lift truck, turn the key switch off and remove the key.
- When operating the parking brake lever, depress the brake pedal.
2. Switch for turn signal lamp
Use turn signal lamp when turning.
Move up the lever:
The right signal light is flashed for the right turn.
Move down the lever:
The left signal light is flashed for the left turn.
- Turn signal light is cancelled when the switch is moved to the opposite direction.

**NOTE**
The turn signal lever is returned to neutral position when released. By turning the steering wheel to the opposite direction, or after 7 seconds, the signal light is turned off automatically.

3. Steering wheel knob, 4. Steering wheel
Grasp the steering wheel knob by the left hand. The right hand should hold the hydraulic levers lightly or put on the steering wheel.
- The electric power steering (EPS) and tilt steering column is the standard equipment.

**NOTE**
Adjust the steering wheel for your best operating position by the tilt steering lever.

**CAUTION**
- Do not travel and apply parking brake while adjusting the steering tilt angle.
- After adjusting the steering tilt angle, tighten the tilt steering lever securely.

5. Directional lever
This lever is used to change the direction of traveling.
For forward: Move the lever forward and depress the accelerator pedal.
For backward: Move the lever backward and depress the accelerator pedal.

**NOTE**
- Travel speed is changed by depressing angle of the accelerator pedal.
- When starting, turn on the key switch, move the directional lever to forward or backward, and depress the accelerator pedal gradually.

**WARNING**
Do not flip the directional lever when changing the direction.
- It is dangerous because the directional lever is flipped back to unexpected direction.

**CAUTION**
- Avoid fast start and sudden movements. This can cause the lift truck to tip over. Such movements can cause people to be hurt or killed and material can also be damaged.
- When parking the lift truck, place the directional lever to neutral position.
2. PART NAME AND FUNCTION

6. Horn button
Horn button is located on the center of the steering wheel and the tilt lever. Press the button to operate the horn.

7. Lift lever
Lifting up the forks: Pull the lift lever backward.
Lowering the forks: Push the lift lever forward.

![NOTE]
Lifting and lowering speed can be controlled by stroke of the lift lever. Do not operate it roughly.
The lift function will not activate if the lift lever is operated before turning on the key switch.

![CAUTION]
Do not stop lifting or lowering suddenly.

8. Tilt lever
Tilting backward: Pull the tilt lever backward.
Tilting forward: Push the tilt lever forward.

![NOTE]
Tilt speed can be controlled by stroke of the tilt lever. Do not operate it roughly.
The tile function will not activate if the tilt lever is operated before turning on the key switch.

9. Rear assist grip (w/horn switch) (Option)
The operator can hold the body when traveling backward by grasping this grip. The push button is a horn switch.
The operator can beep the horn with grasping the grip when traveling backward.
10. Brake pedal, 11. accelerator pedal
Depress the accelerator pedal gradually. Travel speed can be adjusted by depressing angle of the pedal.

**CAUTION** 
Do not depress the accelerator pedal and brake pedal at the same time. The traction motor may be damaged if this occurs.

12. Switch for head lamps
Turn the lever up: Head and tail lights are turned on.
Turn the lever down: All lights are turned off.

13. Switch for the laser pointer (Option)
(Refer the page 39 for details.)
To power on the laser pointer, turn the switch lever up.
When the fork is leveled, the laser pointer irradiates the laser beam and the fork leveling indicator lamp is lit.
To power off, turn the lever down.

14. Seat
The operator's seat is adjustable for the best position to forward or backward by moving the lever under the seat.
Adjustment range is 150 mm each for forward and backward.
When releasing the lever, the seat is fixed. (After adjustment, shake the seat to forward and reverse for a couple of times to make sure it is fixed completely.)
Use reclining lever to adjust the back.
The operator's manual can be stored in the box behind the back of the seat.
2. PART NAME AND FUNCTION

15. Key switch
OFF : This position turns off all electric circuit except some accessories and the key can be put in or taken off.
ON : After turning on all electric circuit, the key switch is held in this [ON] position.
START : This [START] position connects all electric circuit to allow the operation of the forklift truck and monitor display is turned on. The key is returned to [ON] position automatically by releasing.

Automatic power off function:
Suspended the travel and hydraulic operation for 15 minutes, electric circuits are turned off automatically. Turn the key switch into the [START] position to turn the power on again.

16. Emergency stop switch
In case of emergency, press the emergency stop switch. The power supply is shut off and all functions are stopped. By turning the switch knob clockwise, the truck can be powered on again.

- Except the emergency case, do not use the emergency stop switch.
- As the steering operation also doesn’t work at the same time as pressing the switch, it may cause serious accidents in case the switch is pressed during the traveling operation.
- The emergency stop switch shuts off the power supply but does not apply the mechanical brake. So, if the emergency stop switch is pushed while traveling, the forklift truck may keep moving by inertia.
Laser pointer (Option)

Function
The laser pointer is the laser-pointing device for a pallet to find the fork inserting position easily.

Specification
Voltage of power supply:
3 volts D.C. (supplied from the power circuit of a forklift truck)
Length of beam (Line type):
Approximately 500 mm long at 1 m ahead
Width of beam (Line type): 1 through 3 mm wide
Diameter of beam (Point type): 2 through 5 mm dia.
Lighting power: Less than 1 mw
Laser class: 2

Features
• The laser beam
The light beam is a line and easy to find the fork slot on a pallet.

• Fork leveling indicator lamp
(set option with the laser pointer)
When the fork is leveled, the fork icon is appeared on the display with beeping the buzzer.
Another indicator lamp on the lift cylinder is also illuminated. Operator can make sure the fork is leveled not only for picking the pallet but for pulling the fork out also from the pallet when stacking.

The fork level indicator lamp indicates that the fork is leveled when unloading. When loaded, the fork may not be leveled even the indicator lamp is lit because of the flexion of forks.
2. PART NAME AND FUNCTION

For safe operation of laser pointer

Read and understand following cautions.

- Check the focus of the laser beam before operation. If it is out of focus, contact your local Nichiyu dealer for adjustment.

- Do not sprinkle water to the laser pointer.

- Do not use the laser pointer on a slope. Then, it cannot detect the correct position.

- Explain precautions about the laser beam to people who work around the forklift truck.

- The laser beam is just a reference. Operator has to make sure visibly when inserting forks into a pallet.

- The laser light is dangerous when eyes are exposed directly. Do not see the beam directly. Do not see the reflected beam by mirror also.

- Do not disassemble or modify the laser unit.

- Do not use this device in the place where any abnormality or incorrect activation of machines have experienced or expected by the laser beam.
Name of each part

Switch for the laser pointer

To power on the laser pointer, turn the switch lever up. When the fork is leveled, the laser pointer irradiates the laser beam and the fork leveling indicator lamp is lit.

To power off, turn the lever down.
General information for the laser pointer

The LASER POINTER has the laser unit (semiconductor laser) in it. The laser is classified by the output power of the beam. Observe the following precautions.

The laser beam is very dangerous when it is irradiated to eyes.
- Do not see the source of light.
- Do not irradiate the beam to eyes directly.
- Do not irradiate the beam to animals.
- Do not see the beam even reflected.

If saw the laser beam directly, avert eyes from it immediately.
The category of the laser unit in the LASER POINTER is Class 2.
Under this laser class, eyes are protected by winking several times.

Classification of laser
The laser unit is classified by output power for evaluation of risk.
The classification is as follows.

<table>
<thead>
<tr>
<th>Classification</th>
<th>Evaluation for danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class 1</td>
<td>No effect on human body.</td>
</tr>
<tr>
<td>Class 2</td>
<td>Eyes are protected by repugnant reaction such as winking.</td>
</tr>
<tr>
<td>Class 3A</td>
<td>Eyes are protected by repugnant reaction such as winking, but direct watching of the laser beam by an optical way is dangerous.</td>
</tr>
<tr>
<td>Class 3B</td>
<td>Direct watching of the laser beam is dangerous.</td>
</tr>
<tr>
<td>Class 4</td>
<td>High risk is expected for eyes to damage by the laser beam even diffused reflected. Skin damage or source of ignition also may be possible.</td>
</tr>
</tbody>
</table>

The category of the laser unit in the LASER POINTER is Class 2.

注意 CAUTION | レーザー光 LASER RADIATION
ビームをのぞき込まないこと
Do Not Stare Into Beam.
Max Output: <1.0mW. Wave length: 630-690nm.CW; Laser Diode
クラス2レーザ製品 Class 2 Laser Product, BS O 8802:1997
Regarding to affections from or to the LASER POINTER with other equipment

(1) Affection to equipment that uses infrared rays
The wave length of the LASER POINTER (semiconductor laser) is 650 nm, and the general infrared rays are around 800 nm. So, it may not affect each other.

(2) Affection to wireless equipment, OA equipment and/or AGV (Automatic Guided Vehicle)
The laser beam is a lay of light which does not produce electromagnetic noise. So, it does not affect for radio waves.

(3) Affection to LASER POINTER from high-tension line or strong electric noise.
The weak point of the semiconductor laser is the surge (abnormal voltage) that is created by its high-speed response, and high temperature. The LASER POINTER is designed to protect from such circumstances. However, the arc-welding and/or induction noise from a high-tension line is bad for the LASER POINTER, and it may be affected under these circumstances. Therefore, the using place should be made sure not to affect to it. Leaving under direct sunshine in summer is caused high temperature and may shorten the lifetime or damage the laser unit.

The safety precautions of the laser beam shall be explained to operators and other workers around a forklift truck.

Do not use this device in the place where any abnormality or incorrect activation of machines have experienced or expected by the laser beam.

Modification prohibited
• Do not disassemble, modify and/or adjust a potentiometer of the LASER POINTER. They are very dangerous.
• Do not watch a source of light even if not irradiated the beam.
• Do not replace with other similar device for the LASER POINTER.

Do not modify!
3 DRIVING AND OPERATION

- Do not operate the forklift truck prior to daily inspection.
- Inspect the forklift truck before you operate it to be sure that it is properly maintained and in good working order.

Preparation of start

1) Check the directional lever is in the neutral position and the parking brake is applied.
   - Adjust seat position properly.
   - Fasten seat belt.

2) Turn on the key switch
   Grasp the steering wheel knob and then turn on the key switch.

3) Tilting back the mast ass' y.
   - Raise the forks about 150 to 200mm from the floor by the lift lever.
   - Tilt back the mast ass'y by the tilt lever.

   Automatic power off function:
   - Suspending the travel and hydraulic operation for 15 minutes, electric circuit is turned off automatically. Turn the key switch into the [START] position to turn the power on again.
4) Operation of the directional lever
Operate the directional lever to the moving direction.
Forward: Push the lever forward.
Backward: Pull the lever backward.

**WARNING**
Do not flip the directional lever when changing the direction.
- It is dangerous because the directional lever is flipped back to unexpected direction.

5) Release the parking brake
Depress the brake pedal.
Push the parking brake lever forward fully to release the parking brake.
Grasp the steering wheel knob by the left hand. Hold the lift lever lightly by the right hand.

---

**Traveling**

1) Start
Release the brake pedal and depress the accelerator pedal gradually, then the lift truck will begin to move.
Acceleration varies in accordance with the depressing of the accelerator pedal.

**CAUTION**
Do not start or stop the lift truck suddenly.

2) Turning

**CAUTION**
Slow down and operate steering wheel carefully and check to make sure the tail swing area is clear before turning.

3) Electrical brake (Plugging brake)
While traveling, if the directional lever is shifted in opposite position, the electrical brake should be activated.
Braking force varies in accordance with the depressing of the accelerator pedal.
3. DRIVING AND OPERATION

4) Stop
Slow down and apply the brake gradually. Do not apply brake suddenly.

CAUTION
Do not apply brake suddenly.

5) Parking
When parking the lift truck,
- When getting off the lift truck, correctly apply the parking brake lever.
- Tilt the mast to forward and lower the forks on the floor.
- Do not park the lift truck on a slope.
- When leave the lift truck, remove the key.

Stacking operation

CAUTION
Check the following items before operating forklift truck.
Make sure that operating area is clear.

When stacking a load, observe the following procedures.
1. Slow down the travel speed.
2. Stop in front of the stacking place.
3. Check for safety around the stacking area.
4. Face the forklift truck square to the stacking place.
5. Tilt the mast assembly to the vertical position.
6. Lift up the forks above the stacking position.

7. Check the stacking position. Move forward slowly and stop at the proper position.
8. Make sure the load is just above the stacking position, and lower the forks slowly. Make sure the load is stacked correctly.

When the load is not aligned at front or rear ends:
1) Lower the forks until that the load is put on the shelf and the forks are free.
2) Move backward about 1/4 length of the forks.
3) Lift (50-100mm) the forks again and move forward to align the load.
4) Lower the load slowly for proper stacking.

9. Check the clearance of rear side and move backward slowly.
10. Make sure the tips of the forks are off the load or pallet, and lower the forks to the traveling position (150-200mm above the floor).

---

**Picking operation**

When picking the loads, observe the following procedures.
1. Slow down the traveling speed.
2. Stop in front of the load (about 300mm between the load and the fork tips).
3. Make sure the lift truck is square with the load.
4. Check for safety around the picking area.
5. Tilt the mast assembly to the vertical position.
6. Lift the forks to the inserting position.

7. Check the inserting position.
8. Move forward until the forks are fully inserted into the load.

When it is difficult to insert the forks fully into the pallet:
1) Insert about 3/4 length of the forks and lift up the pallet (50mm-100mm).
2) Pull the pallet out about 100-200mm.
3) Lower the pallet again on the shelf, and insert the forks fully into the pallet.
3. DRIVING AND OPERATION

9. After inserting the forks, lift up the pallet about 50-100mm.
10. Slowly retract the mast completely.
11. Check the clearance of rear side and move backward slowly until clear the lowering space of load.

12. Lower the load to the position for traveling.(150-200mm from the ground.)
13. Tilt the forks all the way up to stabilize the load.

14. Carry the load to its destination.
3. DRIVING AND OPERATION

How to use the laser pointer (Option)

When the optional laser pointer is equipped on your truck, follow this instruction for safe and effective operation.

To power on the laser pointer, turn the switch lever up. When the fork is leveled, the laser pointer irradiates the laser beam and the fork leveling indicator lamp is lit.

To power off, turn the lever down.

Picking operation of the load

Follow the next procedure to pick the load. Turn on the power switch of the laser pointer on the front hood.

⚠️ The laser light is dangerous when eyes are exposed directly. Turn off the switch of the laser pointer when not use.

1. Slow down the traveling speed when approaching the load to pick up.

2. Stop in front of the load. (about 300 mm between the load and the fork tips)

3. Make sure the lift truck is square with the load.

4. Check for safety around the picking area.

5. Tilt the mast to the vertical position. Then the laser pointer is lit automatically.

The laser pointer is lit when the forks are leveled. The fork level indicator lamp is also lit then. If the laser positioner and fork level indicator lamp are not lit, make sure if the power switch is turned on.

⚠️ The fork level indicator lamp indicates that the fork is leveled when unloading. When loaded, the fork may not be leveled even the indicator lamp is lit because of the flexion of forks.
3. DRIVING AND OPERATION

6. Lift the forks to the inserting position. Stop forks when the laser light is reached to the center of the girder of the pallet.

NOTE: In the case of the dot type, the laser dot should light to the upper board of the pallet when the fork is in the inserting position.

---

7. Check the inserting position. Then, move forward until the forks are fully inserted into the pallet. If the forks push the pallet, make sure the inserting position again.

NOTE: If it is difficult to insert the forks fully into the pallet:
1) Insert about 3/4 length of the forks and lift up the pallet 50 to 100 mm, and pull it out about 100 to 200 mm. Then, lower it again on the shelf.
2) Insert the forks again into the pallet.

---

8. After inserting the forks, lift up the pallet about 50 to 100 mm.

9. Check the clearance of rear side and move backward slowly to the clear space to lower the pallet.

10. Lower the pallet to the position for traveling. (150 to 200 mm above the floor)

11. Tilt the forks all the way up to stabilize the load.

12. Carry the load to its destination.

13. Turn off the power switch of the laser positioner after picking operation.
Battery

- This section explains NICHUYU's genuine battery and charger.
- When the lift truck is equipped with another type battery and/or charger, please follow the instructions provided by that manufacturer.

Keep away from fire (Explosive gas)

- Never allow open flame to come near the battery.
- Explosive gas is always present in the battery.
- Smoking, flames, or sparks will result in battery explosions.

- Do not travel nor operate hydraulic while charging the battery.

Pay attention to an electric shock

- Do not make a short circuit. The battery has high voltage and power.

- When servicing the battery, wear the safety goggles, rubber gloves and boots.

Connect correctly

- Do not swap the positive and negative terminals.
  - It can cause sparking, burning and/or explosion.

Keep tools away

- Keep tools away from terminals to avoid sparks or shorting.
  - It can cause burning and/or explosion.
4. BATTERY AND CHARGER

Do not over-discharge

⚠️ CAUTION
Do not use the forklift truck until no longer run, it will shorten the battery life.

- When the battery discharge indicator shows empty, charge the battery as soon as possible.

Keep clean

⚠️ WARNING
- Keep the upper surface of the battery clean.
- Do not use a dry cloth when cleaning, as it may produce static electricity.
- Wear the safety goggles, rubber gloves and boots.

⚠️ CAUTION
Clean the battery before charging.

Wear safety clothes

⚠️ WARNING
Wear safety goggles, rubber gloves and boots to protect yourself.

Be careful the electrolyte

⚠️ DANGER
Be careful the electrolyte does not touch the skin.

- Electrolyte of the battery is sulfuric acid.
Emergency first aid

The battery contains sulfuric acid which causes severe burns if touched. If an accident occurs, receive emergency first aid and consult your physician immediately.

- Spilled on skin:
  Wash down with water for 10 to 15 minutes.
- Splashed in eye:
  Wash down with water for 10 to 15 minutes.
- Swallowed:
  Drink large amounts of milk or water.
- Splashed on clothes:
  Take off clothes immediately.

If you do not follow these instructions, you will be seriously injured or killed.

Close vent caps securely

Make sure all vent caps are closed securely. Failure to close the caps can cause leaking of electrolyte.

Washing

Do not wash the battery on the forklift truck. It causes damage to the truck.

Abnormal battery

If the battery shows the following situation, contact NICHIYU's qualified service facility or battery manufacturer.

- The battery stinks.
- The electrolyte is muddy.
- The electrolyte decreases fast.
- The temperature of electrolyte is too high.

Do not disassemble the battery.

Do not drain the electrolyte, disassemble and repair the battery.
4. BATTERY AND CHARGER

Storage

- When storing the battery, store in a well-ventilated and dry place.
- Keep the battery away from open flames or ignitions.

Do not dispose of used batteries.

Please contact NICHYU's qualified service facility or the battery manufacturer for disposal.

Precautions for charging the battery

Check electrolyte level

Do not use the forklift truck if the electrolyte level is low.

- Failure to keep proper level of the electrolyte can cause overheating or burning of the battery and electrical components of the forklift truck.
- Check electrolyte level once a week. If the level is low, add distilled water to the specific level.

Do not over-charge.

Do not over-charge the battery.

Pay attention to an electric shock

Do not touch the terminal or transformer when charging.

- The charger has high voltage and power when working.

Charge in well-ventilated areas.

- Charge batteries only in approved and well-ventilated areas.
- Explosive gas comes out of the battery while charging. If you use the local supply charger, follow its manufacturer's instruction.
4. BATTERY AND CHARGER

Check cable and plug

⚠️ CAUTION
Prior to charging, check the condition of the cable and plug.

⚠️ CAUTION
Do not charge the battery if cable or plug is damaged.

⚠️ DANGER
Do not use any other cable except the original genuine cable even if it can be connected.
- Non genuine cable may cause overheating or burning.

Check specific gravity

⚠️ CAUTION
Measure the specific gravity of all cells before charge.
- The abnormality of the battery may be found by comparing of the specific gravity before and after charging. (Refer the section "Reading of specific gravity")

 Interruption of charge

⚠️ CAUTION
- When interrupting the charge, push the STOP button of the charger before disconnecting plugs.
- Failure to observe this instruction can cause a hazardous electrical shock or explosion of the battery by sparking.

⚠️ DANGER
Do not unplug cable or plug while charging the battery.

Kinds of charge

- There are three kinds of charge. These charges are a normal charge, a balancing charge and a supplementary charge.
- Charging time depends on the discharging condition and capacity of the battery.
- Generally, 8 to 10 hours are required to charge the battery fully.

<table>
<thead>
<tr>
<th>Classification</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal charge</td>
<td>After daily operation or when the &quot;E&quot; segment of the battery discharge indicator is lit.</td>
</tr>
<tr>
<td>Blancing charge</td>
<td>Every two weeks (Check electrolyte level and specific gravity)</td>
</tr>
<tr>
<td>Supplementary charge</td>
<td>In a recess</td>
</tr>
<tr>
<td>Charge for storage</td>
<td>Carry out the blancing charge before storing the battery for an extended time. (Periodical charge for every 15 to 30 days during storage is recommended.)</td>

4. BATTERY AND CHARGER

Charger

⚠️ CAUTION ⚠️
If fuse(s) of the charger are brown, disconnect all input and output plugs first. Then, contact to your local NICHIYU dealer for inspection.

⚠️ CAUTION ⚠️
The supplied voltage should be stabilized within ±10% of the rated input voltage.

⚠️ CAUTION ⚠️
The charger should be used within 0°C to +40°C ambient temperature. If the temperature is 40°C or above, the charger may be overheated.

⚠️ CAUTION ⚠️
The charger shall be protected from the moisture such as rain and snow. Failure to do so can cause an electrical short and/or fire.

⚠️ CAUTION ⚠️
Do not use the charger for other purpose. The charger is designed to charge the battery for the truck.

⚠️ CAUTION ⚠️
Inspect plugs and cables of the charger periodically. If you find any damages burning marks and/or changing color of terminals, do not use the charger until it is repaired.

⚠️ CAUTION ⚠️
The ground cable shall be connected. Otherwise, an electrical shock hazard may be caused.

⚠️ CAUTION ⚠️
Do not disassemble or modify the charger.

⚠️ CAUTION ⚠️
Do not use the charger continuously to charge some batteries in turn. The continuous use can cause overheating, and the charger may be damaged.
4. BATTERY AND CHARGER

Do not connect the charger plug to the chassis plug of the forklift truck.

- This may damage the forklift truck or the charger.

The charger plug (from the charger) must be connect to the battery plug side securely.

- Insecure connection may overheat or get fire on the charger.

Battery plug
Charger plug
4. BATTERY AND CHARGER

How to charge the battery (By stationary charger)

Stationary charger

[Control panel]

- Battery plug
- Charging plug
- Control panel (Controller)
- CHECK lamp (red)
- AUTO lamp (red)
- AUTO button for charge
- EQUAL lamp (red)
- EQUAL button for charge
- STOP button
- Indicating lamp (red) of charging state

Lamps indicate the state of charging. The four lamps turn on from bottom to top by turns in accordance with the charging state. All four lamps turn on when charged fully.

Normal (Daily charge)

This charge returns the battery to a fully charged condition after operating the forklift truck.

1. Move the forklift truck to designated charging area.
2. Turn off the key switch and remove the key.
4. BATTERY AND CHARGER

How to open the battery cover of FB10P-28P

Release the bonnet catch and open the battery cover.

![Diagram showing lock and bonnet catch]

**CAUTION**
Gas spring (assist damper with self locking) is used at the battery cover. Make sure the condition of locking.

**NOTE**
Make sure that the locking pin is secured in the hole.

How to open the battery cover of FB30P/35PJ

Release 2 bonnet catches. And open the battery cover (A) fully as the gas spring is locked.

![Diagram showing battery cover (A) and (B), bonnet catch, and battery cover (B)]

**CAUTION**
The battery cover may hit to the steering wheel when they are opened. Adjust the steering position forward and the seat position backward before opening the battery cover.

**CAUTION**
Gas spring (assist damper with self locking) is used at the battery cover. Make sure the condition of locking.

**NOTE**
Make sure that the locking pin is secured in the hole.

Pull the battery cover (B) to open.

3. Disconnect the battery plug.

![Diagram showing battery plug and disconnecting mechanism]
4. BATTERY AND CHARGER

4. Connect charge plug from the charger with battery.
5. Connect the A.C. plug of the charger with wall outlet.

Then both "AUTO" and "EQUAL" lamps turn on.

**NOTE**
If "AUTO" and "EQUAL" lamps do not turn on, make sure the charger's cable is connected correctly.

6. Push the "AUTO" button.
The "AUTO" lamp (red) is turned on, and "EQUAL" lamp is turned off.
7. When charge is completed, all four lamps (red) of charging state are turned on.

8. Disconnect the rectangular plug and AC plug.

9. Push the yellow stopper at the center of the gas spring and close the battery cover.

\[\text{CAUTION} \]

Be careful not to pinch hands or fingers between battery cover and case.

10. Apply the bonnet catch after closing the battery cover.

\[\text{WARNING} \]

- Do not disconnect the rectangular plug, AC plug and battery plug while charging.
- Do not operate any hydraulic valve levers or accelerator pedal while charging.
- Push the "STOP" button when discontinue to charge.

\[\text{WARNING} \]

Do not touch any parts of charger and cable by wet hand.

- The charger operates with high voltage. Touch by wet hand may cause electrical shock.
4. BATTERY AND CHARGER

Balancing charge
Specific gravity of electrolyte in each cell becomes unbalanced after a certain time of charge. In this case, charge the battery for a little bit longer than a normal charge in order to equalize all cells.

Manual balancing charge
Balancing charge is required for the following cases.
- Every two weeks when the forklift truck is operated every day.
- Not charged for a couple of days after discharged.
- Over-discharged.

- Charging procedure
Push the "EQUAL" button the same way as with a normal charge. "EQUAL" lamp (red) will turn on.

- If the battery plug is disconnected, the memory of time of charging is cleared in the controller and the automatic balancing charge function is not activated properly. In this case, the manual balancing charge is recommended.
- If the forklift truck is not used for a long time after completion of charge, the supplement charge function is activated automatically. Then, the "AUTO" lamp is flashed.

Supplementary charging
When one charge is not enough to finish the daily work, a supplementary charge should be done during a break time. The procedure of the charge is the same as with a normal charge.

- When the ambient temperature is low, the automatic supplementary charge function may be activated. In this case, the "AUTO" lamp will flash while charging.

- Push the STOP button first before disconnecting the battery plug when a charge is interrupted.

Charging for long time storage
Carry out the balancing charge before storage. The periodical charge for every 15 to 30 days is recommended while in storage.

Check the specific gravity
After charging the battery, check the specific gravity. (Refer the section of "Level of electrolyte and specific gravity" for details.)
How to charge the battery (By built-in charger)

**Built-in charger (Option)**

- "AUTO" lamp (green)
- "AUTO" button for normal charging
- "RESERVE" lamp (green)
- "RESERVE" button for reserve charging
- "EQUAL" lamp (orange)
- "EQUAL" button for equalize charging
- "STOP" button for stop charging

**Normal (Daily charge)**

This charge returns the battery to a full-charged condition after operating the forklift truck.

- **Built-in charger (Option)**
  1. Move the forklift truck to designated charging area.
  2. Turn off the key switch and remove the key.
4. BATTERY AND CHARGER

How to open the battery cover of FB10P-28P

Release the bonnet catch and open the battery cover.

Gas spring (assist damper with self locking) is used at the battery cover.
Make sure the condition of locking.

Note
Make sure that the locking pin is secured in the hole.

How to open the battery cover of FB30P/35PJ

Release 2 bonnet catches. And open the battery cover (A) fully as the gas spring is locked.

The battery cover may hit to the steering wheel when they are opened. Adjust the steering position forward and the seat position backward before opening the battery cover.

Gas spring (assist damper with self locking) is used at the battery cover.
Make sure the condition of locking.

Note
Make sure that the locking pin is secured in the hole.

Pull the battery cover (B) to open.
3. Connect the rectangular plug of the AC cable to the receptacle on the charger panel.
4. Connect the AC plug to wall outlet.

\[\text{CAUTION}\]

Make sure that the AC plug is connected properly.

---

Then, all "AUTO", "RESERVE" and "EQUAL" lamps are turned on.

\[\text{NOTE}\]

If these lamps are not turned on, make sure the AC cable is connected correctly.

5. Push "AUTO" button.
6. The "AUTO" lamp (green) is lit. Both "RESERVE" and "EQUAL" lamps are turned off.

When starting to charge the battery, the display on the truck is turned on and shows the charging status on the battery discharge indicator.
4. BATTERY AND CHARGER

7. When charging is completed, the message of "CHARGE COMPLETION" is shown on the display.
8. When the "STOP" button on the charger is pushed or the charging cable is disconnected, this message is disappeared.

- If the charging is not completed within 16 hours, the message of "TIME UP!" is shown on the display to show abnormal completion.
- This message is disappeared when disconnecting the charger cable.

- If the power supply is shut off while charging the battery, the display is turned off once. If the power is recovered within one hour, the charging will be started again with display. If the power is not recovered within one hour, the charging will not be started and completely shut off. (The display is turned off either.)
- After completion of the normal charging of the battery, if the charger cable is not disconnected for more than 44 hours, the supplementary charging will be started if the ambient temperature is less than 5 °C.
  In this case, the charging status is shown on the display again.

9. Disconnect the rectangular plug and AC plug.
10. Push the yellow stopper at the center of the gas spring and close the battery cover.

- Be careful not to pinch hands or fingers between battery cover and case.

11. Apply the bonnet catch after closing the battery cover.

- Do not disconnect the rectangular plug, AC plug and battery plug while charging.
- Do not operate any hydraulic valve levers or accelerator pedal while charging.
- Push the "STOP" button when discontinue to charge.

- Do not touch any parts of charger and cable by wet hand.
  - The charger operates with high voltage. Touch by wet hand may cause electrical shock.
Reserve charge

This function is the timer to start charging of the battery. If you want to start charging after a while, or a few days later, for example, this is very convenient function. This function can charge the battery as the "AUTO" mode only.

- Setting of the starting time

1. Move the forklift truck to appropriate area and park.

2. Push the ⌚ button of the mode select switch to get the reserve charge setting screen. (If pushing ⌚ button, the screen returns to the normal.) The reserve charge setting screen appears when the AC cable is connected to the charger panel also.

3. Push ⤷ or ⤸ button to select "DATE" or "EVERY DAY".

When selecting "DATE"
The reserved time is revised automatically to the same time of seven (7) days later after expiring it. It is convenient to charge the battery every weekend.

When selecting "EVERY DAY"
The reserved time is revised automatically to the same time of the next day after expiring. It is convenient to charge the battery everyday.

The displayed time is the starting time of charge. It is not the finishing time of charge.
4. BATTERY AND CHARGER

• In case of setting of "DATE"
Select "DATE" by pushing << or >>.
Screen displays the current setting. (or no date is displayed if
not set before.)
Push @ button to move the cursor to the month.
Push © button to get the normal screen.

NOTE
When setting the mode of next (1) to (5), each button
works as below.
• << and >> buttons : Move the cursor to select the value.
• © button : Move the cursor to the next item.
• @ button : Back the cursor to the previous item.

(1) Set the month
Push << or >> button to set the month.
After setting of the month, push © button to select the date.
If pushing @ button, the cursor is returns to the "DATE" or
"EVERY DAY" area.

(2) Set the date
Push << or >> to select the date. The day of the week is dis-
played automatically by setting the date.
After setting the date, push © button to move the cursor to the
time (AM or PM).
If pushing @ button, the cursor is returned to the month area.

(3) Set the AM or PM
Push << or >> to select "AM" or "PM".
After the setting, push © button to move the cursor to the hour.
If pushing @ button, the cursor is returned to the data area.
(4) Set the hour
Push < or > to change the hour. Hour can be selected from 1 through 12. After setting the hour, push ® button to move the cursor to the minute. If pushing ® button, the cursor is returned to the AM or PM area.

(5) Set the minute
Push < or > to set the minute. The minute can be set to "00", "15", "30" or "45". After setting, push ® button. Then, "COMPLETE" sign is flashed three times and the display returns to the normal screen. If pushing ® button, the cursor is returned to the hour area.

Make sure that the reserved date and time which are displayed at the left lower corner of the screen is correct.

• The past date and time cannot be set.

Example
Current time 30-Oct (TU), 2015, PM10:30
Input date and time 30-Oct (TU), PM10:00
Reserved setting 30-Oct (TU), 2016, PM10:00

If input the past date and time, it is memorized as the same date and time of the next year.
* If the reserved date and time is become past by setting the current date and time, the same situation is occurred.

• The reservation is invalid if all required data are not entered.
Example : Input data 30-"blank" (TU), PM10:30 ➤ invalid

If any data is not entered (blanked) and move to the next step, all data in that screen will be invalid and deleted.
4. BATTERY AND CHARGER

- In case of setting of "EVERY DAY"
  Push << or >> to select "EVERY DAY”. The screen displays the current setting. If not set before, no data are displayed.
  Push © button to move the cursor to AM/PM.
  Push @ button to return to the previous screen.

  ![Image of "EVERY DAY" screen]

  When setting the mode of next (1) to (3), each button works as below:
  - << and >> buttons: Move the cursor to select the value.
  - © button: Move the cursor to the next item.
  - @ button: Back the cursor to the previous item.

(1) Set the AM or PM
Push << or >> to select "AM" or "PM".
After selecting, push © button to move the cursor to the hour. If pushing @ button, the cursor is returns to the "DATE" or "EVERY DAY" area.

(2) Set the hour
Push << or >> to set the hour. The hour can be set from 1 through 12.
After setting, push © button to move the cursor to the minute. If pushing @ button, the cursor is returned to the AM or PM area.

(3) Set the minute
Push << or >> to set the minute. The minute can be set to "00", "15", "30" and "45".
After setting the minute, push © button. Then, "COMPLETE" sign is flashed three times and return to the normal screen. If pushing @ button, the cursor is returned to the hour area.
4. BATTERY AND CHARGER

Make sure that the reserved date and time which are displayed at the left lower corner of the screen is correct.

- The past time cannot be set.

  Example
  Current time 30-Oct (TU), 2015, PM10:30
  Input date and time PM10:00
  Reserved setting 31-Oct (FR), 2015, PM10:00

  If input the past time, it is memorized as the same time of the next day.
  * If the reserved time is become past by setting the current date and time, the same situation is occurred.

- The reservation is invalid if all required data are not entered.

  Example: Input data PM-"blank" : 00 ➤ invalid

  If any data is not entered (blanked) and move to the next step, all data in that screen will be invalid and deleted.

After the completion of the reserve setting, its data is renewed automatically after the past of its time.
In case of "EVERY DAY", it is renewed to the same time of the next day.
In case of "DAY", it is renewed to the same time of seven (7) days later.
4. BATTERY AND CHARGER

• Reserve charge
This mode starts to charge the battery by the preset date and time.

1. Move the forklift truck to designated charging area.
2. Turn off the key switch and remove the key.

How to open the battery cover of FB10P-28P
Release the bonnet catch and open the battery cover.

⚠️ CAUTION
Gas spring (assist damper with self locking) is used at the battery cover.
Make sure the condition of locking.

NOTE
Make sure that the locking pin is secured in the hole.

How to open the battery cover of FB30P/35PJ
Release 2 bonnet catches. And open the battery cover (A) fully as the gas spring is locked.

⚠️ CAUTION
The battery cover may hit to the steering wheel when they are opened. Adjust the steering position forward and the seat position backward before opening the battery cover.

⚠️ CAUTION
Gas spring (assist damper with self locking) is used at the battery cover.
Make sure the condition of locking.

NOTE
Make sure that the locking pin is secured in the hole.
Pull the battery cover (B) to open.

3. Connect the rectangular plug of the AC cable to the receptacle on the charger panel.
4. Connect the AC plug to wall outlet.

Then, all "AUTO", "RESERVE" and "EQUAL" lamps are turned on.

**NOTE**

If these lamps are not turned on, make sure the AC cable is connected correctly.

5. Push "RESERVE" button.
6. The "RESERVE" lamp (green) is lit. Both "AUTO" and "EQUAL" lamps are turned off.
4. BATTERY AND CHARGER

When starting to charge the battery, the display on the truck is turned on and shows the charging status on the battery discharge indicator.

7. When charging is completed, the message of "CHARGE COMPLETION" is shown on the display.
8. When the "STOP" button on the charger is pushed or the charging cable is disconnected, this message is disappeared.

- If the charging is not completed within 16 hours, the message of "TIME UP !" is shown on the display to show abnormal completion.
- This message is disappeared when disconnecting the charger cable.

To cancel the reservation, push the "STOP" button on the charger panel. To change the reservation, push the "RESERVE" button on the charger panel.

9. Disconnect the rectangular plug and AC plug.
10. Push the yellow stopper at the center of the gas spring and close the battery cover.

Be careful not to pinch hands or fingers between battery cover and case.

11. Apply the bonnet catch after closing the battery cover.

- Do not disconnect the rectangular plug, AC plug and battery plug while charging.
- Do not operate any hydraulic valve levers or accelerator pedal while charging.
- Push the "STOP" button when discontinue to charge.

- The charger operates with high voltage. Touch by wet hand may cause electrical shock.

WARNING

Do not touch any parts of charger and cable by wet hand.
4. BATTERY AND CHARGER

Balancing charge

Specific gravity of electrolyte in each cell becomes unbalanced after a certain time of charge. In this case, charge the battery for a little bit longer than a normal charge in order to equalize all cells.

Automatic balancing charge

In the case of the built-in charger, the controller selects the "EQUAL" mode automatically once of ten charges even pushing the "AUTO" button.

Manual balancing charge

Balancing charge is required for the following cases.
- Every two weeks when the lift truck is operated every day.
- Not charged for a couple of days after discharged.
- Over-discharged.

Charging procedure

Push the "EQUAL" button as the same way as with a normal charge.
"EQUAL" lamp (orange) will turn on.

If the battery plug is disconnected, the memorize of time of charging is cleared in the controller and the automatic balancing charge function is not activated properly. In this case, the manual balancing charge is recommended.
4. BATTERY AND CHARGER

Supplementary charging

When one charge is not enough to finish the daily work, a supplementary charge should be done during a break time.

The procedure of the charge is the same as with a normal charge.

⚠️ CAUTION

When the ambient temperature is low, the automatic supplementary charge function may be activated.

⚠️ CAUTION

Push the STOP button first then disconnecting AC plug and then disconnecting the battery plug.

Charging for long time storage

Carry out the balancing charge before storage.
The periodical charge for every 15 to 30 days is recommended while in storage.

Check the specific gravity

After charging the battery, check the specific gravity.
(Refer the section of "Level of electrolyte and specific gravity" for details.)
4. BATTERY AND CHARGER

Exchanging battery

- When an exchange of a battery is required, the discharged battery should be charged as soon as possible.
- Exchange the battery on the flat floor with following procedure.

The wrong battery size can cause a reduced work time and poor stability. Poor stability could cause the lift truck to overturn. Observe the following range of the battery weight.

<table>
<thead>
<tr>
<th></th>
<th>FB10P</th>
<th>FB15P</th>
<th>FB20P</th>
<th>FB25P</th>
<th>FB30P</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum</td>
<td>560</td>
<td>640</td>
<td>710</td>
<td>815</td>
<td>1095</td>
</tr>
<tr>
<td>Maximum</td>
<td>830</td>
<td>830</td>
<td>1110</td>
<td>1110</td>
<td>1320</td>
</tr>
</tbody>
</table>

Procedure to exchange
1. Turn off the key switch.

2. Disconnect the battery plug.
4. BATTERY AND CHARGER

3. Open the battery cover.

**In case of FB10P-28P**

Release the bonnet catch and open the battery cover.

![Diagram of bonnet catch and battery cover]

**CAUTION**

Gas spring (assist damper with self locking) is used at the battery cover. Make sure the condition of locking.

**NOTE**

Make sure that the locking pin is secured in the hole.

**In case of FB30P/35PJ**

Release 2 bonnet catches. And open the battery cover (A) fully as the gas spring is locked.

![Diagram of battery cover (A) and (B)]

**CAUTION**

The battery cover may hit to the steering wheel when they are opened. Adjust the steering position forward and the seat position backward before opening the battery cover.

**CAUTION**

Gas spring (assist damper with self locking) is used at the battery cover. Make sure the condition of locking.

**NOTE**

Make sure that the locking pin is secured in the hole.

Pull the battery cover (B) to open.
4. Remove the bolts and remove side battery covers.

5. Remove the battery locking pin.

6. Exchange the battery by using slings and hooks.

   - Be careful not to pinch hands or fingers when removing and installing side covers.
   - When exchanging the battery by another lift truck, use proper slings and hooks.
   - When lifting up the battery, be careful not to damage the chassis or equipment.

7. After exchanging the battery, insert the locking pin, install side covers and close the battery cover.

8. Connect the plug of battery side with the plug of chassis side.
4. BATTERY AND CHARGER

9. Push the yellow stopper at the center of the gas spring and close the battery cover.

![CAUTION]
Be careful not to pinch hands or fingers between battery cover and case.

10. Apply the bonnet catch after closing the battery cover.

![WARNING]
- Do not disconnect the rectangular plug, AC plug and battery plug while charging.
- Do not operate any hydraulic valve levers or accelerator pedal while charging.
- Push the "STOP" button when discontinue to charge.

![WARNING]
Do not touch any parts of charger and cable by wet hand.
- The charger operates with high voltage. Touch by wet hand may cause electrical shock.
Level of electrolyte and specific gravity

Electrolyte level

If the battery is used when the electrolyte level is low, the battery will become overheated causing it to have a shorter life.

- When the battery level sensor which is mounted on the side of the battery case shows the red flashing, the electrolyte level is too low.
  (Level sensor is equipped on the Japanese battery only.)

- When the "REPLENISH REFINED WATER FOR BATTERY" message is shown on the display, the electrolyte level is too low.
  (Refer section: MONITOR DISPLAY)
  (This function is option with GS battery only.)

Check of electrolyte level

Electrolyte level can be checked by the float which is equipped in the vent cap.
4. BATTERY AND CHARGER

### Replenishment of water

To maintain the specific level of electrolyte, replenish with refined water. (You do not need to replenish the sulfuric acid. Use refined water only.) Wear safety goggles, rubber gloves and boots for your protection.

1. Open the vent caps of all battery cells.
2. Replenish water into each cell.
3. Stop replenishing when the red float is raised and the white line appears.

4. After replenishing to all cells, close all vent caps completely.  
5. Clean the top of cells by wet cloth.

**CAUTION**
- Do not replenish water over the maximum level.
- Overfilling will cause the electrolyte to overflow while charging resulting in damage to the forklift truck.

### Reading of specific gravity

The specific gravity of electrolyte is changed by temperature. Measure the temperature of electrolyte by a thermometer and the gravity of electrolyte by a hydrometer. Convert the actual gravity to the specific one at 20°C by the thermal conversion table.

<table>
<thead>
<tr>
<th>Specific gravity at full charged</th>
<th>1.280 (at 20°C)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specific gravity at discharged</td>
<td>1.180 (at 20°C)</td>
</tr>
</tbody>
</table>

**CAUTION** When the specific gravity is below 1.18 at 20°C, should be done the balancing charge.

**SPECIFIC GRAVITY OF ELECTROLYTE AND THERMAL CONVERSION TABLE**

How to convert the specific gravity:
For example, if the hydrometer reading is 1.25 at 5°C, the specific gravity at 20°C is 1.24.
**INSPECTION PRIOR TO OPERATION**

A daily pre-operation inspection is the key to safety and keeping the forklift truck in good condition. At the beginning of each shift, check your forklift truck to make sure it is in safe operating condition. If faults are found, contact NICHYU's qualified facility.

- Do not operate the forklift truck until finishing repairs and inspections.
- Inspecting trucks should be made on a flat floor.
- Be sure to turn off the key switch and disconnect the battery plug while checking the electrical system except while turning on the lamps and checking operation.

5. INSPECTION PRIOR TO OPERATION

Inspection procedure

1. Check functions of safety monitor
[MONITORING OK] is displayed for a few seconds after turning the key switch on at normal condition.

2. Check head lamps, turn signal lamps and horn
Check operation of lamps.
Check sound of horn.

3. Check brake fluid
If "REFILL BRAKE OIL" message is appeared on the display, remove the cap from the brake fluid reservoir and check the level and condition of the fluid.

CAUTION: Do not spill the brake fluid on any painted surface. Any spillage will cause the painted surface to become damaged.
5. INSPECTION PRIOR TO OPERATION

4. Check parking brake lever
Pulling the parking lever and check:
- Suitable pulling force
- Enough braking force
- No damaged parts
Adjust the pulling force by the adjust screw at the bottom of the lever.

5. Check foot brake pedal
Check performance of brake and make sure the stroke of the foot brake pedal.
Proper braking distance without a load is about 2.5m.
Adjust if the braking distance is more than above specs.

6. Check play of steering wheel
Turn the steering wheel to the right and left, and check the free play (50-100mm). The steering wheel moves up and down approximately 1.8mm. This is normal.

7. Check power steering function
Turn the steering wheel to the right and left to check the steering operation.

8. Check the hydraulic functions
Check if lifting and tilting operations are smooth.
5. INSPECTION PRIOR TO OPERATION

9. Check hydraulic oil
Check oil level by using the level gauge when the forks are lowered on the floor.

[Plastic tank]
Appropriate oil level is within the range of level A and B.

<table>
<thead>
<tr>
<th>Applicable model</th>
<th>Oil level</th>
<th>Actual using quantity of oil</th>
</tr>
</thead>
<tbody>
<tr>
<td>FB10P-25P (less than 3000mm)</td>

<td>15-17.5 l</td>
</tr>
<tr>
<td>FB10P-25P (over 3000mm)</td>
<td>LEVEL B</td>
<td>20-22.5 l</td>
</tr>
</tbody>
</table>

[Metal tank]
Appropriate oil level is within the range of H and L.

<table>
<thead>
<tr>
<th>Applicable model</th>

<td>LEVEL H-L</td>
<td>23-26 l</td>
</tr>
<tr>
<td>FB30P/35PJ</td>
<td>LEVEL H-L</td>
<td>26-29 l</td>
</tr>
</tbody>
</table>

10. Check lift chains
Raise the forks 100mm above the floor and check if the tension is the same for both right and left chains. The mast carriage should be level. If the carriage leans to the right or left, adjust the chain anchor bolts.

CAUTION: After proper adjustment, tighten up the lock nuts securely.

11. Check oil piping
Check for any oil leakage from the lift cylinders, tilt cylinders and oil piping.
12. Check tyres
Measure the air pressure by using the air pressure gauge.

<table>

<td>700 (7.00)</td>
<td>900 (9.00)</td>
</tr>
</tbody>
</table>

After checking air pressure, check that no air is leaking from the valve.

13. Check hub nuts
Check if the hub nuts are secured by tightening them with a torque wrench.

<table>

</tr>
<tr>
<td>FB35PJ</td>
<td></td>
</tr>
</tbody>
</table>

14. Check charging
Measure the specific gravity of battery.
When it shows 1.260-1.280 at 20°C conversion, the battery is fully charged.

15. Check overhead guard and load backrest
Check if all fitting bolts and nuts are correctly secured and torqued.

16. Check beam of laser pointer (Option)
If optional laser pointer is equipped, irradiate the beam and check its focus.

17. Others
Check for any other abnormalities.
Inspection after working

At the end of each shift, clean the forklift truck and inspect the following items.

- Any damage or oil leakage.
- Apply grease if required.
  Refer to [Lubrication points and recommended oil]
- Raise the lift carriage to the maximum lifting height several times if your normal operation did not require to do so. (The hydraulic oil is supplied to the full stroke of the cylinder by lifting to the maximum height. It helps to prevent rust from forming inside the cylinders.)
- Check any abnormal parts which are found any defects while operation.

⚠️ CAUTION
- A small fault can cause a serious accident.
- Do not operate the forklift truck until finishing repairs and inspections.

⚠️ CAUTION
If the forklift truck will be stored for a long time, the following maintenance should be done.
1. The lift truck should be stored where is no rain or snow, and no open flames.
2. The balancing charge should be done every 15 to 20 days while storing.
3. Raise the lift carriage to the maximum lifting height several times once a month to protect the lift cylinder from corrosion.
PERIODIC SERVICING

Periodic inspections and maintenance are necessary to keep your NICHIYU forklift truck running safely and smoothly. Hours shown in the maintenance schedule are based on eight hours operation per day and 200-hour operation per month. Make your own maintenance schedule using this formula for your operation requirements.

All servicing and repairs shall be made by authorized personnel.
- Contact NICHIYU's qualified facility for adjustments and/or repairs.

Precautions of maintenance

Use NICHIYU genuine parts for replacement. If non-genuine parts are used and a problem occurs, NICHIYU will not offer any guarantees.

Use NICHIYU recommended oil. Refer to [Recommended oil].

Maintenance place

- Servicing facility should provide adequate equipment and safety guards.
- Servicing place should be on a flat floor.
- Be sure there is adequate ventilation in the service area.
- Fire extinguishers shall be provided at the servicing facility.

Precautions of maintenance

- Smoking shall be prohibited.
- Wear safeguard (helmet, shoes, glasses, gloves and boots) and suitable clothes.
- Wipe off spilt oil at once.
- When lubricating, remove grease and dust off nipples and fittings with a brush or a cloth before lubrication.
- Turn off the key switch and disconnect the battery plug except when required for trouble shooting.
- When servicing a forklift truck, lower forks to the floor.
- Clean the electrical components with compressed air.
Precautions during servicing

- Do not put your feet under forks and be careful not to stumble over forks.
- When forks are lifted up, put blocks under the inner mast to prevent the mast and forks from falling.
- Be careful not to pinch your hands when opening and closing the covers and clamps.
- When working as a group, be sure everyone works safely with each other.
- Use only suitable tools.
- The hydraulic circuit may have a high pressure condition. Release the inside pressure before performing any service or repairs.
- Do not climb on the mast.

Never put any part of your body into mast structure or between mast and forklift truck.

Maintenance of the lift cylinder

The lift cylinder has the special construction for the shock absorbing function. Please contact to your local NICHYLU dealer for disassembling and assembling.

Inspection and exchange of tyre

- Leave a dismounting and mounting tyres to NICHYLU's qualified service facility.
- Handling a high pressure air shall be made by authorized personnel.
- When use a compressed air, wear goggles.
- When dismounting the tyre, do not loosen bolts and nuts of joint rim. As inside tyre is high pressure, there is a danger of breaking bolts, nuts and rim.
Jacking up

WARNING
Do not go under the forklift truck while it is being jacked up.
Failure to observe this warning can cause serious injury or death if the forklift truck falls on you.

CAUTION
- Before jacking up the forklift truck, make sure no one is around and no load is on the forklift truck.
- Before jacking up, place wheel chocks at tyres.
- After jacking up, use blocking or proper stands to prevent the forklift truck from falling.

Hoisting the truck

CAUTION
- Lift the forklift truck by trained persons only.
- Use slings and hooks which have sufficient strength.
- Place slings and hooks to the designated positions.

Disposal of waste

CAUTION
Observe local rules to dispose waste such as oils and a battery.
7. PERIODIC SERVICING

Weekly (50-hour) servicing

Inspect the following items in addition to the inspection prior to operation.

<table>
<thead>
<tr>
<th>Check points</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electrolyte level</td>
<td>Check the electrolyte level. When the level is low, replenish with refined water.</td>
</tr>
<tr>
<td>Specific gravity of electrolyte</td>
<td>Measure the specific gravity and temperature of electrolyte of all cells.</td>
</tr>
<tr>
<td>Cleaning of battery</td>
<td>Clean the top surface and vent cap of each cell.</td>
</tr>
</tbody>
</table>

⚠️ CAUTION
Be sure to disconnect the battery plug when inspecting the electrical system.

---

Check the level of electrolyte

Refer to [Level of electrolyte and specific gravity].

⚠️ CAUTION
- After completing the replenishment, securely close the vent caps.
- Do not replenish the water over the maximum level.

---

Check for specific gravity of electrolyte

Measure the quantity and specific gravity of all cells.

**Normal**: It is normal when all cells specific gravity are the same.

**Abnormal**: It is abnormal if the difference of the specific gravity is more than 0.05 from other cells.

Refer to [Battery electrolyte and specific gravity] how to inspect the specific gravity of battery.
Cleaning of battery

Keep the battery clean by wiping off with a damp cloth.

**WARNING**
- Keep the upper surface of the battery clean.
- Do not use a dry cloth when cleaning, as it may produce static electricity.
- Wear the safety goggles, rubber gloves and boots.

**CAUTION**
Clean the battery before charging.

The inside of vent caps will be stained and making of the float difficult to see. Clean the caps by the following procedures.

**NOTE**
This is the case of Japanese battery.

1. Remove the vent caps by turning counterclockwise.
2. Wash the inside of vent caps with a neutral detergent. If they are severely stained, brush them.
3. Install the vent caps by turning clockwise.

**CAUTION**
Make sure all vent caps are completely closed.
